

RouteReserve: Travel Booking & Management System

Running Guide & Execution User Manual

Author: Rachana R Tunga

Date: July 2026

1. System Prerequisites

Node.js (v18.0.0 or higher), PostgreSQL (v15.0 or higher) running locally on port 5432, and Git.

2. Environment Configuration

Create a file named `.env` inside the `backend/` directory containing:

```
DATABASE_URL="postgresql://postgres:your_postgresql_password@localhost:5432/en2h_booking_db?schema=public"
JWT_SECRET="en2h-nestjs-booking-platform-jwt-secret-key-998877"
PORT=5000
```

3. Database Initialization & Seeding

Open your terminal and execute these commands:

```
cd backend
npx prisma migrate dev --name init
npx prisma db seed
```

4. Run Servers

From the root folder, run:

```
npm run install:all
npm run dev:backend
npm run dev:frontend
```

5. Verification via Swagger API Docs

Open <http://localhost:5000/api> in your browser.

5.1 Test Authentication Login: Email: `user1@gmail.com`, Password: `Rachana#Tunga@2026!`

5.2 Authorize Swagger Session: Click Authorize, paste the copied `jwt access_token` value, and click Authorize.

5.3 Test Bookings Checkout: Execute `GET /services` to copy a service id, paste it into `POST /bookings` with seat assignments, and run to get a 201 response.
